H.264 TS Cutter Crack + License Key [Mac/Win]

TRIM tool can be used to remove unwanted parts of a 4k H.264 video file and to convert the resulting part from H.264 to MPEG-4. 4k H.264 video is an innovative H.264 standard which can record ultra-high-definition video as well as movies in 4k-resolution. The usage of 4k H.264 video is growing very fast, since the new release of H.264 standard offers almost double compression ratio (11-12 Mbps) as compared to older H.264 standard (5-6 Mbps). That means that in order to view 4k-resolution video you need to buy new 4k TV or monitor which is able to play 4k H.264 video. Also H.264 video files can be used for online usage, since standard H.264 video allows to record streaming movies and online video in 4k-resolution. 4k H.264 video is the most advanced video format. You can easily watch your favourite movies and TV series in 4k-resolution now. If your video player is able to play the 4k-resolution videos you don't need to convert 4k videos to another formats to watch them in 4k-resolution, you can just stream the video directly from 4k-compatible server or player. TRIM tool is a part of VideoTrim software which allows to trim and convert videos in any format. If you need to cut some part from a video you can:

- crop the beginning and end of the video to trim videos
- speed up or slow down the video
- crop the video to remove borders (black bars)

VideoTrim software is simple to use. It is easy to use, but if you have no enough experience with it you will be able to use it only after some training. VideoTrim offers multiple ways to trim videos. You can trim the video manually, you can set up intervals (back 10 frames, back 50 frames, back 100 frames, back 500 frames) or you can use saved project. You can also use different kind of output video formats. .ts file can be converted to common video formats:

- avi (avi)
- mov (mp4)
- mp3 (mp3, mp3m4a)
- mpeg-2 (mpeg2, mpeg2 video)
- flv (flv)
- wmv (wmv, wmv2)
- mp4 (
