Category:Alternative rock discographies Category:Production discographies Category:Discographies of American artistsThe present invention is directed to an improved audio tape cassette. Digital tape recorder and compact cassette players, among other devices, are being developed with an increasing level of sophistication. Features such as motion control, color picture displays, automatic track seeking, and record/playback tracking are becoming increasingly important. Efforts to design and manufacture a tape cassette with all of the features needed to meet the consumer's demands are being intensified. The tape reel used in a conventional cassette is typically made of metal, such as aluminum, or synthetic resin material, such as polyvinyl chloride. When the tape cassette is placed into a standard CD or VCR player, the reel is inserted into the hub of the CD or VCR drive. The reel is also provided with a friction drive which prevents the reel from rotating as the drive's motor drives the reel. The reel is provided with a number of spaced teeth formed on its external periphery. The teeth engage a drive gear which is typically mounted on a driven shaft. The driven shaft is located within the hub of the tape reel and engages the tape in a drive channel, typically having a radius of about 5 mm, which is cut into the hub of the tape reel. The teeth on the reel are spaced from the drive gear by a distance of about 8 mm. As the driven shaft rotates, the drive gear is pressed radially inward with
